

Getting Started with Anaconda, Jupyter, and GitHub Desktop

1. Install Anaconda

Go to <https://www.anaconda.com/download>.

Download the installer for your system (Windows/macOS).

Run the installer → keep default settings.

2. Open Jupyter Notebook

Open Anaconda Navigator (Start Menu / Applications).

Click Launch under Jupyter Notebook.

A browser opens → create a new notebook: New → Python 3.

3. Install GitHub Desktop

Download from <https://desktop.github.com>.

Install and sign in with your GitHub account.

4. Create a Repository for Your Exercises

In GitHub Desktop → File → New repository.

- Name: python-exercises

- Local path: choose the folder where your notebooks will be saved

Click Create Repository.

5. Save and Commit Your Work

Do your exercises in Jupyter Notebook.

When finished → open GitHub Desktop.

- You'll see your modified notebook listed as a change.

Write a commit message (e.g. "Exercises from today").

Click Commit to main.

6. Push to GitHub

In GitHub Desktop, click Push origin (top bar).

Your notebook is now uploaded to GitHub.

7. After Each Course

At the end of the session:

1. Save your notebook.
2. Open GitHub Desktop.
3. Commit your changes.
4. Push origin.

✅ That's it!

- Use Anaconda + Jupyter for coding.
- Use GitHub Desktop to save and share your work.
